### Seoul Stay Bank Gateway

To run the server on your local machine please find "Bank.Server.exe" in the attachment folder. Once the server is running please refer to the following:

API Address:	http://localhost:5000/
Technical Documentation	http://localhost:5000/swagger/

Bank Gateway Flow

The cardholder pays the merchant for a purchase with a credit card

The merchant send the credit card details to the acquirer

The acquirer forwards the credit card details to the credit card network

1. Client visits Merchant website (Seoul Stay).
2. Request token by calling "PaymentToken".
3. Return "trackId" to the merchant website.
4. Redirect User to payment gateway passing "trackId" using "http://localhost:5000/payment/{{trackId}}".
5. Return payment status to merchant website.
6. If payment status is "success" you need to call "VerifyPayment" passing "TokenId" to confirm the payment.
